193 (9): We see by the alternating series test that $\sum_{k=1}^{\infty} \frac{1}{\sqrt{k}} = \sum_{k=1}^{\infty} (-1)^k d^k$ Las that ak derroses men of on; cally oind is strictly positive, and is converges.

K=1 Tk m converges.

This sequence is absolutely convergent if S (-1) (cnv(198).

... = 2 TK by applying dbs, value to top and bottom.

Then, by the "All power law sums at once" proof in Session 63, we

Et diverges due to z=P < 1; thus, it is conditionally convergent

(b) Once again by leib n'z, seet hat (since $(-1)^{k'} = (-1)^{k}$ to $(-1)^{k'} = (-1)^{k'}$ $(-1)^{$

I'm portly test to see that (with by = 1) Applying the root fast to the series & pro , we have that lim (In) = (In) = | Thusfor P-series Latleast) the root test dields inconclude results, since we know that for P21 this the converge and for P21 it converge Nice.
